

RecoTraffic MMS

*Maintenance Management
System*

RecoTraffic MMS

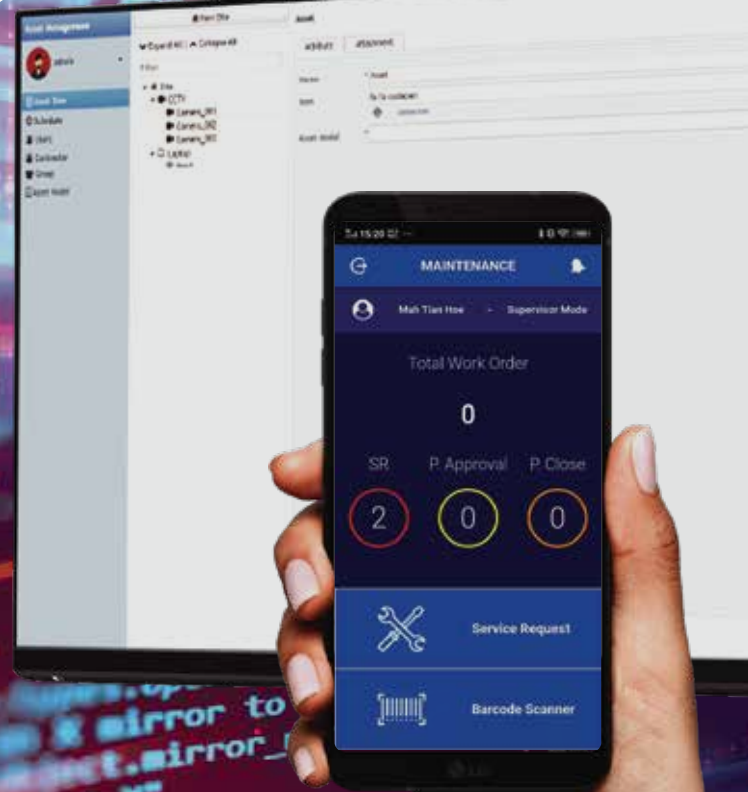

RecoTraffic MMS is our centralised cloud-based Maintenance Management System. It allows organisations to manage and optimise maintenance activities.

RecoTraffic MMS provides tools for tracking, monitoring, maintaining, and analysing assets, including equipment, vehicles, buildings, and other physical or digital assets.

RecoTraffic MMS is a system that centralises maintenance information and streamlines maintenance operations. It aids in the optimisation of physical asset utilisation, performance, and availability

A study conducted by the Aberdeen Group shows that there was a 15% increase in asset utilisation and a 20% reduction in maintenance costs with the effective usage of Maintenance Management System - Study by the Aberdeen Group

*Asset Management : The Changing Landscape of Predictive Maintenance, March 2014 [chrome-extension://efaidnbmnnnibp-cajpcglclefindmkaj/https://web1.e-techservices.com/wp-content/uploads/2017/02/YTL03210USEN.pdf](https://web1.e-techservices.com/wp-content/uploads/2017/02/YTL03210USEN.pdf)

How will RecoTraffic MMS help your organization?

Centralised Asset Tracking

RecoTraffic MMS allows an organisation to keep track of all their assets in one central location, making it easy to access the information needed.

Real-Time Monitoring

RecoTraffic MMS provides real-time monitoring of an organisation's assets, allowing them to be alerted of any potential issues before they become major problems.

Better Cost Control

Organisations can identify areas where cost savings can be made, such as reducing the number of underutilised assets, negotiating better prices for replacements or upgrades, and optimising maintenance schedules.

Increased Efficiency

RecoTraffic MMS helps to streamline the processes and increase efficiency, allowing an organisation to focus on delivering the best possible service to their customers.

Improved Decision-Making

With customisable reports, RecoTraffic MMS enables organisations to make data-driven decisions about the deployment and allocation of assets.

Key Features
